

## Usage

To use the sample, please follow these steps :

- Make new Unity project
- Import **HISPlayer Android iOS SDK** package
- Import **HISPlayer Oculus Sample** package
- [Configure HISPlayer Settings for Unity Android](#) :
  - Unity Editor main menu > HISPlayer > Player Settings Configuration > Select Build Target to Android > Set all the required settings
- Configure Unity project for Oculus by following the guide from <https://developer.oculus.com/documentation/unity/unity-tutorial-hello-vr/>
  - Colorspace : Linear. Target Architecture : IL2CPP ARM64
- Input the license key through the Inspector Window. StreamController game object → HISPlayerSample component → License Key
- Open Assets/HISPlayerOculusSample/Scenes/**HISPlayerOculusSample** and add it to the Build Settings
- Build and Run

To check how to set up the SDK and API usage, please refer to

Assets/HISPlayerOculusSample/Scripts/Sample/**HISPlayerSample.cs** and **StreamController** game object in the Editor.

## 360 Video Playback

The video is rendered to Unity Skybox material for a good 360 experience.

Below Materials and Render Textures are used in this sample :

- Assets\HISPlayerOculusSample\Resources\RenderTextures\Materials\HISPlayer\_RenderTexture.mat
- Assets\HISPlayerOculusSample\Resources\RenderTextures\HISPlayer\_RenderTexture.renderTexture

Material settings :

- Click on the **HISPlayer\_RenderTexture.mat** and check the Inspector window.
- Shader : **Skybox/Panoramic**
- Spherical (HDR) : **HISPlayer\_RenderTexture.renderTexture**

In this project, Oculus **OVRCameraRig** is used instead of normal Unity Main Camera. The Skybox material needs to be attached to Oculus Camera :

- OVRCameraRig → TrackingSpace → CenterEyeAnchor → Inspector Window → Skybox → Custom Skybox → **HISPlayer\_RenderTexture.mat**

Setting HISPlayer stream properties :

- Hierarchy Window → StreamController → Inspector Window → HISPlayerSample(Script) → HISPlayer Attributes → MultiStream Properties :
  - Render Mode : Render Texture
  - Render Texture : **HISPlayer\_RenderTexture.renderTexture**
  - URL : set your URL.

Users are able to modify the UI of this sample.

- All the UI components are located inside Hierarchy Window → Canvas
- Canvas settings (Inspector Window) :
  - Render Mode : **Screen Space - Camera**. The UI will always follow camera movement.
  - Render Camera : **CenterEyeAnchor (Camera)**. This is the camera of Oculus.

The UI is rendered to Oculus Camera, therefore it is not controllable from the Unity Editor at runtime. It is recommended to test this project directly on an Oculus device.
